☒ Other: Vegetation removal & installation of concrete pad within shoreline setback

6d. Describe how you plan to construct each project element checked in 6c. Include specific construction methods and equipment to be used. [\[help\]](#)

- Identify where each element will occur in relation to the nearest waterbody.
- Indicate which activities are within the 100-year flood plain.

A rock bulkhead exists along the shoreline. Based on information from the applicant, the bulkhead was existing and was repaired. No evidence was found to suggest the contrary. The bulkhead extends along the shoreline of the subject property.

A concrete patio, measuring approximately six hundred thirty (630) square feet, was installed along the shoreline of Hicks Lake at the end of the existing dock.

Ecology blocks would be along the pedestrian path to prevent erosion and landslides within the sloped Vegetation Management Area.

Enhancement of the Vegetation Management Area would occur through invasive weed removal, the installation of geofabric, and planting of native vegetation.

None of the above activities are within the 100-year flood plain.

6e. What are the start and end dates for project construction? (month/year) [\[help\]](#)

- If the project will be constructed in phases or stages, use [JARPA Attachment D](#) to list the start and end dates of each phase or stage.

Start date: Upon receipt of permits

End date: Prior to permit expiration

☐ See JARPA Attachment D

6f. Describe the purpose of the project and why you want or need to perform it. [\[help\]](#)

The purpose of the project was to enhance the shoreline use, protect the shoreline from erosion, enhancement habitat within the Vegetation Management Area, and to remove the noxious weed Japanese knotweed, which was a requirement by Thurston County. Some trees were limbed to enhance the view onto the Lake.

6g. Fair market value of the project, including materials, labor, machine rentals, etc. [\[help\]](#)

7h. Use the table below to list the type and rating of each wetland impacted; the extent and duration of the impact; and the type and amount of mitigation proposed. Or if you are submitting a mitigation plan with a similar table, you can state (below) where we can find this information in the plan. [\[help\]](#)

Activity (fill, drain, excavate, flood, etc.)	Wetland Name ¹	Wetland type and rating category ²	Impact area (sq. ft. or Acres)	Duration of impact ³	Proposed mitigation type ⁴	Wetland mitigation area (sq. ft. or acres)

¹ If no official name for the wetland exists, create a unique name (such as "Wetland 1"). The name should be consistent with other project documents, such as a wetland delineation report.

² Ecology wetland category based on current Western Washington or Eastern Washington Wetland Rating System. Provide the wetland rating forms with the JARPA package.

³ Indicate the days, months or years the wetland will be measurably impacted by the activity. Enter "permanent" if applicable.

Part 8—Waterbodies (other than wetlands): Impacts and Mitigation

In Part 8, “waterbodies” refers to non-wetland waterbodies. (See Part 7 for information related to wetlands.) [\[help\]](#)

☒ Check here if there are waterbodies on or adjacent to the project area. (If there are none, skip to Part 9.)

8a. Describe how the project is designed to avoid and minimize adverse impacts to the aquatic environment. [\[help\]](#)

☐ Not applicable

The Vegetation Management Area would be enhanced through the control of invasive and noxious weeds and the planting of native vegetation within fifty (50) feet landward of the ordinary high water mark.

Repair and maintenance of the rock-built bulkhead was necessary to control erosion and to stabilize the shoreline. Using rock, rather than concrete, minimizes environmental impacts and provides a substrate and hiding places for invertebrates (Completed).

The installation of ecology blocks along the pedestrian path would protect the slopes of the Vegetation Management Area from erosion and sedimentation that could deteriorate the aquatic environment.

8b. Will your project impact a waterbody or the area around a waterbody? [\[help\]](#)

☒ Yes ☐ No The project will enhance the Vegetation Management Area

8c. Have you prepared a mitigation plan to compensate for the project’s adverse impacts to non-wetland waterbodies? [\[help\]](#)

- If **yes**, submit the plan with the JARPA package and answer 8d.
- If **No, or Not applicable**, explain below why a mitigation plan should not be required.

☒ Yes ☐ No ☐ Not applicable

The Joyner-Gusta Shoreline Restoration Plan has been included with this JARPA package.

8d. Summarize what the mitigation plan is meant to accomplish. Describe how a watershed approach was used to design the plan.

- If you already completed 7g., you do not need to restate your answer here. [\[help\]](#)

The mitigation plan is meant to enhance the current Vegetation Management Area (shoreline setback area) by removing noxious and invasive weed species and replacing them with native vegetation. Geofabric will be used to minimize erosion along the hillside and native vegetation will be planted over the fabric.

Concrete blocks (or ecology blocks) will be installed along the existing path on the hillside to stabilize the slopes and prevent soil erosion.

8e. Summarize impact(s) to each waterbody in the table below. [\[help\]](#)

Activity (clear, dredge, fill, pile drive, etc.)	Waterbody name ¹	Impact location ²	Duration of impact ³	Amount of material to be placed in or removed from waterbody	Area (sq. ft. or linear ft.) of waterbody directly affected
N/A					

¹ If no official name for the waterbody exists, create a unique name (such as "Stream 1") The name should be consistent with other documents provided.

² Indicate whether the impact will occur in or adjacent to the waterbody. If adjacent, provide the distance between the impact and the waterbody and indicate whether the impact will occur within the 100-year flood plain.

³ Indicate the days, months or years the waterbody will be measurably impacted by the work. Enter "permanent" if applicable.

8f. For all activities identified in 8e., describe the source and nature of the fill material, amount (in cubic yards) you will use, and how and where it will be placed into the waterbody. [\[help\]](#)
